When parking facing **downhill**, turn your front wheels towards the curb or right shoulder. This will keep the vehicle from rolling into traffic if the brakes become disengaged.

Turn the steering wheel to the left so the wheels are turned towards the road if you are facing uphill with a curb. The tires will catch the curb if it rolls backward.

When facing **uphill** without a curb, turn the wheels sharply to the right. If the vehicle rolls, it will go off the road rather than into traffic.

When parking on a hill, always set the parking brake a

nd shift into first or reverse gear. Turn off the engine and remove the key. Check for traffic before opening the door and remember to lock your vehicle.
